WALT'S WATCH LAB / WATER RESISTANCE GUIDE

WHAT DOES "100 m" MEAN ON MY WATCH?

WALTON custom watches

Look on the dial or case back. The markings 100 m and 10 bar describe the same test pressure. Use your model's guidance to decide which activities suit your watch.

30 m
3 bar

Everyday splashes
Wear it in the rain or while washing your hands. Take it off before swimming.

50 m
5 bar

Check before swimming
Some models allow surface swimming. Check the guidance for yours before getting in the pool.

100 m
10 bar

Swimming and snorkeling
This rating commonly suits laps in the pool and snorkeling at the surface.

200 m
20 bar

Higher pressure rating
Swimming and snorkeling. For scuba, choose a watch the maker specifically designates for diving.

What does DIVER'S 200 m mean?
DIVER'S identifies a watch designed for scuba. ISO 6425 also covers how divers can track elapsed time and read it in the dark.

IMPORTANT TO REMEMBER

Close the crown
Push it all the way in. If it screws down, secure it. Wait until the watch is dry before adjusting it.

Seals age
Unsure when your watch was last checked? Have a watchmaker pressure-test it before swimming.
